

Complete internet safety solution for UK schools

The WebSafe4Schools range comprises sophisticated yet easy to use security devices designed especially for UK schools. Using the very latest hardware and internet security software from internet security specialists such as McAfee and Sophos, as well as NIS, it offers high quality internet protection at a cost that schools can afford. WebSafe4Schools is a complete package of hardware, software and support services including all the required software updates and hardware warranties for a 3 year period – so there are no hidden charges.

Full Unified threat Management (UTM) for Schools Package:

- ✓ Powerful internet filtering incorporating the best of list and content filtering solutions
- ✓ Powerful firewall to protect your school from outside attack
- ✓ Web and email protection: anti-virus, anti-malware, anti-spam
- ✓ Google and Bing SafeSearch enforcement
- ✓ Keyword and phrase filtering
- ✓ Full compatibility with school Active Directory systems for secure logon and applying policies for individual pupils and staff
- ✓ Automatic software updates – no manual intervention required
- ✓ Simpler and cheaper to install and run than overly complex systems from competitors
- ✓ Full audit logs – see who has gone where
- ✓ Solid-state hardware design for highest reliability
- ✓ Full 3 year hardware warranty
- ✓ Next school day replacement should hardware fail
- ✓ Designed to exceed former BECTA requirements specifications
- ✓ Incorporates Internet Watch Foundation CAIC list

Schools have found that WebSafe4Schools is easy to control on a day-to-day basis, providing good filtering at the right price!

Features and benefits

Full Unified Threat Management

WebSafe4Schools combines everything you need to protect your school network. Included in our package is a wide range of Unified Threat Management (UTM) protection measures - not just web filtering. We include a state-of-the-art firewall, as well as a full complement of tools to combat against all types of viruses and other threats – from Trojan Horses and Worms, to Malware and Spyware. This means you can be safe in the knowledge that your school network is fully protected all of the time.

Best of Breed Protection

Rather than attempt to create all the software for WebSafe4Schools by ourselves, we have integrated packages from some of the world's foremost experts in internet security – McAfee and Sophos. We've done this to give you the extra peace of mind when it comes to knowing that your School is safe. These organisations have a presence in over 50 countries ensuring they get to tackle internet threats wherever and whenever they originate. So whatever you may hear about or read about, you will know you've got it covered.

“We have made an excellent choice by installing WebSafe4Schools”

RAF Education Branch

Internet Filtering

WebSafe4Schools uses the combined power of two filtering approaches. Firstly, list based filtering technology from McAfee with over 90 web categories, including blocking of BECTA categories of Adult, Violence, Race/Hate, Illegal Drugs, Criminal Skills, and Gambling. Secondly, it implements content filtering from NIS. This means the system can review the content of uncategorised pages before they are displayed.

WebSafe4Schools also provides for Google/Bing SafeSearch enforcement – preventing searching for inappropriate images and pages.

Keyword and phrase filtering allows schools to build or amend their own dictionaries of undesirable words and phrases to block.

Schools have commented that they could find no other solution providing the right combination of performance and security features at the price of WebSafe4Schools.

Protection against malware, viruses and spam

Today's network security threats are much more sustained and malevolent than they were two or three years ago. Cyber criminals have become far more efficient and ruthless.

Your school network can be compromised by pupils or staff inadvertently downloading malicious software from either genuine or rogue websites.

WebSafe4Schools provides two highly effective defences against this type of attack. Firstly, WebSafe4Schools automatically looks up on its large online databases to see if the site you are about to browse is known to contain malware, blocking access and preventing infection if this is the case. Secondly, it can scan website information before it reaches your PC - and checks to see if it contains viruses or other malware and blocks activation of anything potentially harmful.

WebSafe4 Schools will also stop the majority of spam emails targeted at your school. It can prevent or highlight common scams being tried by cyber criminals.

Controlled and logged access

WebSafe4 Schools is fully compatible with school Active Directory systems for secure logon and applying access policies appropriate to individual pupils and staff members.

Filtering policies are extremely flexible and easily modified.

Audit logs of who has visited which websites are available, along with analysis tools.

State-of-the-art Firewall

WebSafe4Schools incorporates an excellent firewall which protects against external threats such as a 'Denial-of-Service' attack. It also prevents against internal threats e.g. preventing access to unauthorised services being set up from the school network to an external service or servers.

Meeting guidelines

WebSafe4Schools has been designed to exceed the former BECTA organisation's filtering products and services requirement specifications. It also incorporates the Internet Watch Foundation (IWF) Child Sexual Abuse Images and Content (CAIC) list.

Installation and ongoing maintenance

WebSafe4Schools is simple to install and comes pre-configured with all the addressing and default filtering profiles required for your school. Depending on your requirements, NIS can undertake full installation and commissioning of hardware and software. Of course, should you need a helping hand, during installation or beyond, telephone support is available from our dedicated support team.

WebSafe4Schools will look after itself, keeping itself automatically updated with the latest security software to ensure your school continues to benefit from enterprise-level security and protection at a fraction of the cost.

High reliability

WebSafe4Schools has been designed to offer both high performance and high reliability. As the system uses solid state memory storage technology and not hard disks found on PCs and servers it is not only much faster and more reliable, but also quieter.

Hardware Warranty

WebSafe4Schools comes with a full 3 year warranty. In the very rare event of the unit failing during this warranty period, you will be sent a replacement system by courier, to arrive no later than the next school day already preconfigured to fit straight into your network.

Working alone or in tandem

WebSafe4Schools can act as the sole security device at a school gateway with the internet or in tandem with services offered by local authorities or service providers.

The WebSafe4Schools Range

WebSafe4Schools has been designed to offer both high performance and high reliability. To improve reliability over previous generation internet security devices WebSafe4Schools has no rotating disk drives - having much faster and more reliable solid-state storage.

WebSafe4Schools is easy to configure and comes with helpful guides. Telephone support is available if you need help. Units keep themselves automatically updated with all the latest countermeasures.

All WebSafe4Schools models come with 3 years subscription to security software updates and a 3 year hardware warranty with a next school day hardware replacement service.

WebSafe4Schools-50

WebSafe4Schools-50 is ideal for primary schools with up to 50 PCs or other devices. Despite being the entry-level model of our range it easily out-performs mid-range models of some of the biggest names in the networking business.

WebSafe4Schools -100

WebSafe4Schools-100 is ideal for larger primary and middle schools with up to 100 PCs or other devices.

WebSafe4Schools-250 and -500

WebSafe4Schools-250 and -500 are ideal for secondary schools organisations with up to 250 or 500 PCs.

About NIS Ltd.

NetPilot Internet Security (NIS) Ltd is a UK company with a twelve year history of supplying leading edge security solutions. It specialises in the UK market and all its products are designed and built in the UK.

NIS has supplied internet filtering and security products into several thousand UK businesses and armed forces establishments, in addition to primary and secondary schools. The recent rapid growth in the number of devices supplied into UK education is based on the quality and the cost-effectiveness of the WebSafe4Schools solution.

NetPilot has been at the heart of internet filtering for all three branches of the armed forces for nearly ten years and is deployed worldwide. The RAF has recently further endorsed the solution by re-equipping with the very latest NIS UTM appliance units.
